OVERALL CIMI RANKING WITH ASSIGNED WEIGHTING

The following graphs present rankings for each of the four CIMI dimensions (economic, social, civic and democratic, and health) using different weighting procedures. The CIMI standard for ranking immigrant integration in Canadian provinces/cities is to place the most emphasis (i.e., “weight”) on the economic dimension (0.4) followed by the social (0.3), civic and democratic (0.2), and health (0.1) dimensions. The first graph presented in blue (upper left corner of first page) presents the rankings for Canadian provinces/cities based on this CIMI standard, which was determined by the Expert Advisory Committee. The subsequent graphs present non-standard rankings for provinces and cities, placing higher importance on the other dimensions of immigrant integration (social, civic and democratic, and health). Twenty-four (24) different sets of rankings were calculated to give researchers, academics, service providers and policy makers the ability to select the scenarios that best represent the realities in their field of work or study.
